Data Analyst

[LinkedIn](#) | [GitHub](#) | [Kaggle](#)

Profile

I began my career in professional acting and theatre operations, where analysing scripts, understanding motivation, and anticipating audience response required structured thinking and attention to detail. When I started working with data, I realised the same mindset — asking precise questions, identifying patterns, and turning complexity into clarity — applied just as naturally. That realisation led me to transition into data analysis. I am now retraining as a data analyst, with strong SQL fundamentals and hands-on experience delivering end-to-end analysis on real-world datasets, while completing the Google Data Analytics Certificate alongside full-time work.

Projects

SQL Data Analysis Project | [Kaggle Notebook](#)

Conducted a full start-to-finish analysis using SQL on a real-world dataset, from raw data ingestion through to insight generation. Wrote structured SQL queries using joins, aggregations, and filters to answer business-focused questions.

- Cleaned and validated data to ensure accuracy before analysis.
- Presented findings clearly with commentary explaining both methodology and insights.

Excel Data Analysis Project | [Kaggle Notebook](#)

- Performed end-to-end analysis using Excel, including data cleaning, transformation, and exploratory analysis.
- Used formulas and pivot tables to identify trends and patterns within the dataset.
- Structured the analysis to mirror real business problem-solving, starting from stakeholder questions and ending with actionable insights.

Additional Strengths

- Clear communicator
- Strong organisation and time-management skills
- Self-starter with proven discipline and work ethic
- Comfortable learning new tools independently

Technical Skills

- SQL: Writing structured queries to clean, join, and aggregate datasets in order to answer specific analytical questions and generate actionable insights.
- Spreadsheets: Cleaning and transforming raw data, using formulas and pivot tables to identify trends and support data-driven decisions.
- Python: basic foundations (refresher planned)
Data Visualisation: Tableau / Power BI (currently learning)
- Tools: Kaggle, GitHub, BigQuery, Excel/Sheets

Professional Experience

Stage Door Keeper | Theatre (London)

- Act as a key communication point between performers, production teams, and management, requiring clarity, accuracy, and professionalism.
- Develop strong stakeholder awareness by understanding needs, anticipating issues, and responding effectively under time pressure.
- Demonstrate high attention to detail and responsibility in a live operational environment.
- Balance full-time work alongside ongoing data analytics training and a professional acting career, requiring excellent time management and prioritisation.

Education & Training

Google Data Analytics Certificate: – In progress

SQL, spreadsheets, data cleaning, data analysis process, capstone project including data visualisation (Tableau / Power BI)

BA (Hons) Acting – First Class:

Strong communication, presentation, and analytical interpretation skills

A-Levels:

Physics, Chemistry, Mathematics
